

Spiral Wound Gasket (SWG)

Style : DI

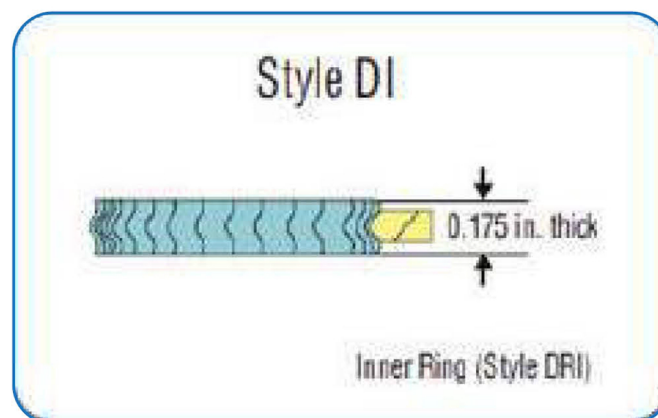

Description :

Style DI - Sealing element (D) inner ring (I) which work as a compression stop

Service :

The major advantages of our Style (DI) are protecting windings against media and pressure, reduce turbulent flow of process media, and minimize erosion of flange faces. Thank you to the Inner metal ring that acts as a compression stop and fills the annular space between flange bore and the inside diameter.

Typically used for male-to-female pipe flanges
